

Sage PFW ERP

MSDS

Dynamic enough to work with your current needs, yet flexible enough to meet future requirements—Sage PFW ERP MSDS is the perfect solution for the complicated demands of material safety data sheets (MSDS) compliance requirements. With Sage PFW MSDS you save time and money, enabling your organization to generate accurate and complete material safety data sheets quickly every time, without sacrificing accuracy or control! Effortlessly provide your customers with precise information regarding the reportable materials contained within your products, physical property information, first-aid procedures, safe handling, storage procedures and more.

Sage PFW MSDS can automatically generate a material safety data sheet in full compliance with government and industry reporting requirements. Flexible, reportable components in completely customizable formats, automated physical property calculations, and multilingual capabilities simplify the complexities of MSDS management. The MSDS formats are designed to give you the greatest flexibility and a wide variety of information. Based on the specific product for which the MSDS is printed, you can choose to include details regarding hazardous material ratings, manufacturer's name and address, reportable components, occupational exposure limits, SARA information, product physical characteristics, and assorted standardized blocks of text. Enjoy the streamlined simplicity of MSDS management with Sage PFW MSDS.

Sage PFW meets the needs of your business, providing fast, dependable and customizable MSDS compliance and data security. Unlike most manufacturing software, Sage PFW was developed from the ground up to address the unique challenges of process manufacturing. Its complete solution of powerful financial and process manufacturing modules provide specifically targeted capabilities to boost production, maximize profits, and increase efficiency in your supply chain.

CUSTOMIZATION

Save time and resources with customizable features that tailor the system to your unique business requirements today, and easily adapt to changes in the future.

STREAMLINED INTEGRATION

Eliminate redundant data entry and automate your workflow process with a comprehensive, fully integrated system that streamlines MSDS compliance.

POWERFUL FLEXIBILITY

Simplify your MSDS processing with a versatile format that accommodates virtually any MSDS content.

SATISFY GOVERNMENT REGULATIONS

Capitalize on the most comprehensive MSDS system in the industry. Sage PFW eliminates the complexities of MSDS processing—saving you valuable resources.

AUTOMATED EFFICIENCY

Streamline MSDS compliance with extensive automatic features that save time, eliminate errors, and facilitate smooth, cost-efficient operations.

INSIGHTFUL REPORTS

Transform your data and gain the insight you need to manage your business more effectively with flexible, customizable reporting.

Customization

Increase efficiency and accuracy by effectively processing information according to your unique business requirements. With Sage PFW MSDS you can begin printing your material safety data sheets right away, utilizing one of several standard MSDS formats already defined, including ANSI and U.S. government standards plus Canadian English and Canadian French. However, MSDS is also designed to give you the greatest flexibility to meet your specific needs. Should regulations change, or your state or locality have special reporting requirements, you can easily modify one of the predefined formats or create a totally customized format. You can define new sections, change the meaning of existing sections, or remove sections entirely. There is no limit to the amount or type of information that can be included in a section. To support your presence in the global marketplace, the MSDS may also be printed in various languages. Powerful customization maximizes efficiency and puts you in control of MSDS management—saving you valuable time and resources.

Streamlined Integration

Enable your personnel to work within a central database and share uniform, consistent, and secure information without double entry or duplicating efforts. MSDS eliminates redundant entry efforts by leveraging information from the Inventory Pro and Formulas modules. You can optionally integrate with the Laboratory, Order Entry Pro, and Production modules to include even more information on your material safety data sheets, such as physical properties calculations, customer details, and open or historical production data. To minimize data entry and maximize productivity, take advantage of the MSDS module's synergy with additional modules.

Powerful Flexibility

With the MSDS module, you have complete control over the format and content of your material safety data sheets. Your material safety data sheets can be easily configured to include company details, product identification, and reportable components. In addition, formula physical properties, such as density, specific gravity, percent volatile, boiling range, flash point, and upper and lower explosive limits are automatically calculated and printed in the specified location on the MSDS. Warnings, advisory statements, safe handling, storage requirements, and virtually any other "standard" text are also easily accommodated. There is no limit to the amount or type of information that can be included in an MSDS! Since the content of each MSDS is determined at the time it is generated, the MSDS always reflects the most current information so that time-consuming manual MSDS maintenance is virtually eliminated.

Satisfy Government Regulations

Increase accuracy and eliminate costly mistakes by automatically generating material safety data sheets in full compliance with the United States government's Occupational Safety and Health Administration (OSHA) Hazard Communication Standard, Superfund Amendments and Reauthorization Act (SARA) Title III, the nongovernmental American National Standards Institute (ANSI), and almost all similar government and industry reporting requirements. Sage PFW keeps you in compliance with complex regulations—saving you valuable time and money.

Automated Efficiency

Simplify and organize your material safety data sheet generation utilizing powerful scheduling tools. An MSDS can be scheduled and generated for many types of items, including current or historical formulas, finished goods, raw materials, current or closed batches, and products previously ordered by customers. Optional, automatic revision tracking further streamlines the process by triggering a new MSDS to be sent when an update is required. The MSDS module also prints customer mailing labels, making it easy to send an updated MSDS to your customers. Even the distribution of an MSDS to your customers can be managed and automated by Sage PFW!

Insightful Reports

With Sage PFW MSDS, you can generate a variety of detailed reports, which empower you to monitor your compliance data easily and manage MSDS with insight. Sage PFW utilizes one of the most powerful reporting tools on the market, Crystal Reports®, which gives you the ability to export data in more than 20 formats, quickly send reports over e-mail and perform snap customizations. You can even export your MSDS in HTML format to enable posting on your company's Web site. From the details to the big picture, you'll be equipped to keep your company on track for MSDS compliance.
